Scientific Drilling

Survey Certification

7327 West Barton Road
Casper, WY 82604
(307)-472-6621 Fax (307) 472-5439

Operator	Oasis Petroleum
Well Name & No.	Lewis Federal 5300 11-31 4BR OH
API #	33-053-08946
County & State	McKenzie County, ND
SDI Job #	OP.016663
Rig	Nabors B21
Survey Date	14-Mar-2019

I, Seth M. Burstad, having personal knowledge of all the facts, hereby certify that the attached directional survey run from a measured depth of 0 feet to a measured depth of 16577 feet is true and correct as determined from all available records.

Seth Burstad

DETAILS OF WORK

Oasis Petroleum North America LLC requests a variance to NDAC 43-02-03-21 for the tubing/packer requirement: Casing, tubing, and cementing requirements during the completion period immediately following the upcoming fracture stimulation.

The following assurances apply:

1. the well is equipped with new 29# and 32# casing at surface with an API burst rating of 11,220 psi;
2. The Frac design will use a safety factor of 0.85 API burst rating to determine the maximum pressure;
3. Damage to the casing during the frac would be detected immediately by montioring equipement;
4. The casing is exposed to significantly lower rates and pressures during flowback than during the frac job;
5. The frac fluid and formation fluids have very low corrosion and erosion rates;
6. Production equipment will be installed as soon as possible after the well ceases flowing;
7. A 300# gauge will be installed on the surface casing during the flowback period

Well Evaluation

Figure 1. Nabors drilling rig #B21 at the Oasis Petroleum NA, LLC. Lewis Federal 5300 11-31 4BR; March 2019, McKenzie County, North Dakota.

Introduction

The Oasis Petroleum NA, LLC. Lewis Federal 5300 11-31 4BR is located in Baker Field of the Williston Basin [Lot 1 Section 31, T153N, R100W]. The subject well is located approximately 8 miles south of the town of Williston, in McKenzie County, North Dakota **(Figure 1)**. The Lewis Federal 5300 11-31 4BR is the fourth of four wells drilled on the Lewis Federal 5300 11-31 pad. The subject well was drilled to replace the Lewis Federal 5300 11-31 4B, which had drilled to kick off point before being plugged and abandoned. This pad is set up as a 1,280 acre laydown spacing unit, with 500' N/S and 150' E/W drilling setbacks. The subject well is permitted to drill east from the surface location in section 31 into section 32. The well consists of a single Middle Bakken Member lateral, targeting a silty sandstone facies, with intent to intersect preferred porosity and fractures.

Engineering Operations Overview

The Lewis Federal 5300 11-31 4BR was spud on February 18, 2019. The surface hole was drilled with one 17.5" assembly to a depth of 3,629'. The complete BHA accomplishments can be found in an appendix to this report. The 13 3/8" surface casing was set to a depth of 3,598'. Due to the presence of several salt water disposal wells in the immediate area the decision was made to set a 9 5/8" isolation casing string through the Inyan Kara and into the Swift. The isolation portion was drilled with two 12 ¼" assemblies. The 9 5/8" casing was then set to set to a depth of 6,142'. The remainder of the vertical hole was completed with two 8.75" assemblies. The first vertical assembly drilled to a depth of 8,609' before being replace due to low ROP, the second drilled to a depth of 10,301' (KOP).

The curve assembly consisted of an 8.75" Baker DD505TS PDC bit, a 2.38° NOV mud motor, and Scientific Drilling's MWD tools. The curve was successfully landed at 11,170' MD on March 3, 2019. The projection to bit upon reaching casing point was that the assembly had an inclination of 91° and was at a TVD of 10,773', approximately 16' below the Upper Bakken Shale. Seven inch diameter 32# P-110 intermediate casing was set to 11,155' MD at landing. As the first lateral assembly drilled out of casing it was realized that the inclination in which casing was set was much less than had been projected. The first survey read an inclination of 78.21°. Projecting to the bit this placed the wellbore ~2' from the top of the Lower Bakken Shale. After confirming that the 78.21° was correct the decision was made to trip out and pick up a higher bend motor and displace the salt water drilling fluid with oil-based mud and slide drill ahead through the Lower Shale and return to the Middle Bakken. This resulted in 144' on Lower Bakken Shale exposure.

Due to the heavy (10.8 ppg) invert mud weight drill rates were substantially slower than the previous wells on the Lewis Federal 11-31 pad. The second lateral assembly drilled to a depth of 16,577' before a trip was required due to low ROP. While tripping in with the third lateral assembly, tight hole conditions were experienced at the Lower Bakken Shale contact. As the assembly was washing through the shale the BHA was oriented to the high side. The assembly washed through to a depth of 11,456' before stopping due to the rising MWD continuous inclination (98.53°). Since this inclination was ~5° higher than the surveys observed while drilling on March 7, it was postulated the assembly had unintentionally sidetracked while washing through the shale. This new wellbore was titled Sidetrack #1 and can be found in the surveys appendix of this report. The decision was made to set a cement plug at the intermediate casing shoe, sidetrack off the plug and proceed with a new lateral, titled Sidetrack #2.

Sidetrack#2 was drilled off the cement plug of the original wellbore at 11,152' on March 15, 2019. It drilled to a depth of 16,014' and was terminated in the Upper Bakken Shale on March 20, 2019. At this time the integrity of the survey data and calculated true vertical depths came into question due to corresponding depths of the previous wellbores that had been drilled on the pad. Several surveys were reshot throughout the sidetrack which resulted in inclination and azimuth swings of no more than 0.20 degrees.

Sidetrack #3 was initiated at 14,990' on March 21, 2019 and was drilled off of Sidetrack #2. Sidetrack #3 was terminated in the Upper Bakken Shale at a measured depth of 15,669' on March 22, 2019, 15' of TVD above Sidetrack #2, resulting in a formation dip of 87.31°. The decision to drill an additional sidetrack in effort to complete the lateral was made.

Sidetrack #4 was drilled was drilled off of Sidetrack #2, it was initiated at 14,500' on March 22, 2019. Sidetrack #4 was terminated in the Lower Bakken Shale on March 24, 2019, at 17,079'. An additional sidetrack was planned at this time. Sidetrack # 5 was drilled off of Sidetrack #4 at 16,825', it drilled to a depth of 16,834' at which point it was abandoned by order of Oasis Petroleum, and a new sidetrack point was picked.

Sidetrack #6 was drilled off of Sidetrack #4 at 16,235’ on March 26, 2019. The first lateral assembly of Sidetrack #6 drilled to a depth of 20,195’ before a trip was warranted due to an MWD failure. The final lateral assembly reached a total depth of 20,780’ on March 29, 2019, without further incident.

Thirteen six-inch lateral assemblies were used on this wellbore, which included tri-cones, sidetrack bits, and PDC’s, along with 1.5° and 2.25° motors. The last lateral assembly being bit #15RR2, a Reed PDC TKC53 with a 1.5° fixed Discovery motor. A total depth of 20,780’ was reached at 20:45 hours, central time, on March 29, 2019.

Offset Control

Offset well data can be found in the ‘Control Data’ section appended to this report. Offset wells were essential in providing control, making it possible to develop a prognosis of formation tops and curve landing target depth. The three primary offsets were, The *Oasis Petroleum North America, LLC, Lewis Federal 5300 11-31 3B,* the *Oasis Petroleum North America, LLC, Lewis Federal 5300 11-31 2B,* and the *Oasis Petroleum North America, LLC, Wade Federal 5300 41-30 8T3.* By referencing the gamma signature of these offsets and using formation thicknesses, a model was formed for the target interval pinpointing a strategic landing**.** Formation thicknesses expressed by gamma ray signatures in these offset wells were compared to gamma data collected during drilling operations in to successfully land the curve.

Geology

Sample evaluation began in the Otter Formation at 8,260’ measured depth (MD). Lagged samples were caught by Sunburst personnel in 30’ intervals through the vertical and curve, and 50’ intervals in the lateral. Rock samples were evaluated under wet and dry conditions using a stereo zoom binocular microscope for the identification of lithology including the presence of porosity and oil. Only observed prospective intervals are described here, but detailed lithological descriptions for all formations are provided in the ‘Lithology’ appendix.

The **Mission Canyon Formation** [Mississippian, Madison Group] was logged at 9,510' MD, 9,448’ TVD (-7,313' MSL). The Mission Canyon Formation is described as light to medium gray, cream, and light brown gray in color. Samples are predominately microcrystalline and are a firm mudstone. The limestone has an earthy, rarely crystalline texture. Also noted in in several samples are traces of fossil fragments. The lime mudstone is argillaceous in part throughout this interval. In certain areas poor intercrystalline was noted but there was no significant oil staining observed in samples. Throughout the Mission Canyon gas shows are promising, but slightly less than two previous wells on this pad, with an average background gasses ~31u with gas shows peaking at 77u.

Figure 2. Wet sample cuttings of silty sandstone from the Mission Canyon.

The **Bakken Formation**

The Upper Bakken Shale Member [Mississippian] was recorded at 10,987' MD, 10,741’ TVD (-8,606' MSL). Entry into this member is characterized by high gamma counts (>300 API), elevated background gas and increased rates of penetration. While drilling through the Upper Bakken Shale gas a background gas of 800u was observed, as well as a survey gas of 1917u. The distinct black shale is carbonaceous and *petroliferous,* as well as, firm and platy. Minerals including disseminated/nodular pyrite and trace calcite fracture fill were observed.

The Middle Bakken Member [Mississippian-Devonian] was entered at 11,038’ MD, 10,757' TVD (-8,622' MSL). Samples in the Middle Bakken are predominantly a light brown, medium to light gray, light brown gray, and occasionally cream silty sandstone. The silty sandstone is fine to very fine grained, friable to occasionally firm. The Middle Bakken typically contains sub-round to sub-angular grains. Samples are smooth, moderately sorted and poorly cemented by calcite. Rare to trace quantities of disseminated and nodular pyrite is present as is *trace to fair intergranular porosity*. Trace to rare *light-medium brown, spotty oil stain* was visible in many of these samples. While drilling the Middle Bakken background gasses ranged from ~200 to 3,000 units while several shows exceeded 3500u. Upon starting sidetrack#4 at 14,500’ the gas buster was turned on, gases averaged 1,000 to 3,000 units after that point.

Figure 3. Wet sample cuttings of silty sandstone from the Middle Bakken.

Geosteering

Well control insinuated the structure of the Lewis Federal 11-31 4BR would be a consistent down dip over the course of the lateral. Oasis operations geologists provided casing point slides prior to drill out, with Upper Bakken structure maps, in which they anticipated the structure to be down at 89.55º for the first 4,000’ of vertical section, then steepen to 89.20º to 6,000’ of vertical section, followed by 89.50º for the remainder of the lateral to completion. It was also suggested that the structure would be much like that of the first and closest lateral drilled on the pad, the Lewis Federal 5300 11-31 3B.

While drilling the curve of the Lewis Federal 5300 11-31 4BR the Lower Bakken Shale was contacted. Due to the lower than anticipated build rates through the curve, it was possible to use the gamma signatures throughout the middle member as a type log. Upon exiting the cement plug of Sidetrack #2 and coming down into target, it became apparent that the gamma signature was very similar to the initial curve landing and was the best reference to use as a control. The Middle Bakken Member of the Lewis Federal 5300 11-31 4BR was 39’ from shale to shale. Whereas when drilling the Lewis Federal 5300 11-31 3B, a thinner Middle Bakken model of 36’ was used.

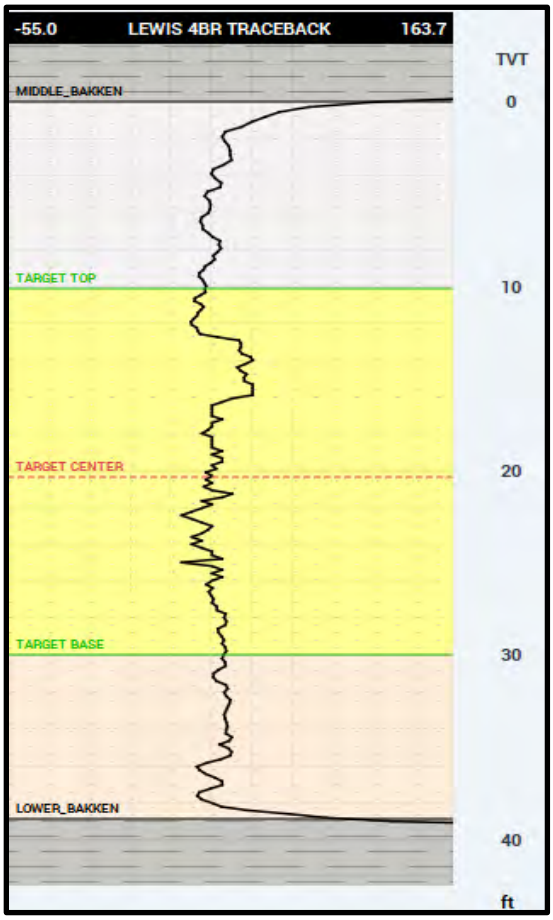

Figure 4. Target definition for the Oasis Petroleum, Lewis Federal 5300 11-31 4BR.

The target interval was defined by proximity to the shales and not by an ideal porosity interval. The 20’ target began 10’ below the Upper Bakken Shale and extended to 9’ above the Lower Bakken Shale. Prior to drilling out Sidetrack#2, it was determined by the initial drilling of Sidetrack#1, that the warmer chattery gamma located at 13’ TVT through 16’ TVT was going to be the most consistent steering guide in recognizing the upper portion of target. The non-descript, featureless gamma of 26’ TVT to 30’ TVT would

be the best indicator of being in the lower portion of target (**Figure 4**). The cool gamma markers located at 7' TVT and 36' TVT would be predications of close shale proximity and should not be approached as to make steering decision, but only be used as a last-ditch effort to pull a stop card, avoiding any shale strikes.

As drilling began into Sidetrack #2 it became apparent that subtle changes in gamma signature were hard to distinguish from one another. Average gamma counts of 44 api, with a maximum of 56 api, were present throughout target. The coolest gamma counts witnessed were 26-29 api, which was attributed to the marker just below target center at 23' TVT or the gamma Marker out target top at 7' TVT. With such a minuscule change in gamma signature it was possible to misinterpret one portion of target for another. The notion of targeting 13-16' TVT was possible, however, it was easily mistaken for the gamma near 21-26' TVT. The gamma signature as well as the exact count were near identical when exiting the top of target and the bottom of target. It is also worth mentioning that when the wellbore is being drilled at or near formation dip, gamma signature does not change, and can be easily misinterpreted as moving through either of these sections.

While drilling Sidetrack #2 several interpretations varying by 17' TVT in both directions, plausibly overlaid the gamma of the type log. As a result, best practices suggested to use the interpretation that most closely placed the wellbore near the TVD of the first wellbore, the Lewis Federal 5300 11-314BR, since the lateral was safely drilled to 16,577' MD (5,935.68' VS) without contacting the shale. As Sidetrack #2 was drilled ahead, projected target TVDs were set, that most closely matched the target TVDs of the original wellbore, as well as using the most plausible interpretations of gamma overlay to match. At an approximate measured depth 15,947' (~5,302' VS) and TVD of 10,825.88' the shale was contacted solely based on drilling parameters (lost weight on bit, increased rate of penetration). The driller continued drilling ahead to 16,014', when drilling parameters did not return to normal, and gamma visibly heated up, at which point he was instructed to pull off bottom. Bottoms up was circulated and shale was confirmed in the sample. The previous wellbore had been drilled within half a foot of TVD at this exact vertical section. Due to this it was thought that surveys were bad, and a gyro truck was called. Prior to the gyro truck's arrival Oasis had the rig trip out, re-shooting several surveys along the way. When the survey data came back with no less than 0.20° swings in azimuth or inclination, the decision was made not to drop a gyro and the truck was called off.

Two viable interpretations using gamma signature upon entering the shale could be done, placing the wellbore in the lower or upper shale. Unable to get a solid confirmation through sample cuttings or gamma overlay both scenarios were inspected closer. An Upper Bakken Shale strike scenario calculated a -0.80° dip from Upper Bakken Shale at curve landing to the shale strike. Whereas a lower shale strike calculation from Lower Bakken Shale at landing to shale strike produced a -0.35° dip calculation. The average dip of the first lateral from target entry to termination was exactly -0.80°. When the survey data of all re-shot surveys was imported it showed the TVD moving upward with each edit. Though unreliable, Directional Drillers plotted the continuous inclinations which also showed a substantial rise in TVD. It should be noted that not one of these tools could indicate the exact shale that was entered with 100% certainty alone. However, using all the information at hand Sunburst personnel came to the solid conclusion that the Shale strike was in fact an Upper Bakken Shale strike. The Oasis Operations Geologist was contacted by Sunburst in which valid concerns were made of an Upper Bakken Shale strike, and each piece of evidence voiced in favor of the Upper versus the Lower Shale, it was also stated how detrimental the conclusion was prior to drilling out the next sidetrack. Sunburst was informed that the Oasis Geologist's as a whole concluded that it was a Lower Bakken Shale strike and to proceed ahead using that interpretation.

Sidetrack #3 was then initiated at 14,990' under Oasis's assumption that the previous sidetrack struck the Lower Bakken Shale and therefore was drilled above Sidetrack #2. While drilling ahead a cool gamma Marker of 27 api was encountered at 15,460' which was the marker at 7' TVT, 7' from the Upper Bakken Shale. At 15,622' while sliding 90º left to veer Sidetrack #3 away from the existing sidetrack rates of penetration increased from 2.7 minutes a foot to one minute per foot. It was at this time the shale was

assumed to be entered near a TVD of 10,811'. The driller drilled to 15,669' feet before being instructed to pull of bottom. A bottoms up was circulated and shale was confirmed in the sample. The two shale strikes resulted in a dip calculation of approximately -2.69º. This abrupt drop in formation was not expected nor seen on both of the wells drilled on the pad. At this point Oasis geologists, onsite Sunburst Geology, and Sunburst's remote steering center all did completely separate interpretations of both shale strikes. The consensus of Sunburst geology, both onsite and remote, was that both shale strikes took place in the Upper Bakken Shale, Oasis geologists also came to that conclusion.

Sidetrack #4 was kicked off of Sidetrack #2 at 14,500'. Directional drillers were instructed by Oasis's drilling department to stay 10' of TVD below Sidetrack #2 at all times, and to not steer using gamma markers until safely past the first wellbore attempt. At this time, it was known that between the two shale strikes from 15,622' to 15,947' that there was a -2.69º down dip. At 16,315' a stop card was pulled by onsite geology because low gamma counts of 30 api were witnessed, along with the bit building to 91.31º resulting in a TVD of 10,842'. After speaking via phone call with Oasis Geology and drilling superintendents the decision was made to drop through target to a TVD of 10,871' (a vertical drop of nearly 30') at 17,000' or approximately 6,300' VS. Anticipating that the steep dip was still present Sunburst Geology agreed with the plan and directional proceeded ahead sliding down and keeping inclinations low enough, as to move down in section and gain on dip. The bit drilled to the deepest TVD of 10,857' when a combination of upward slides and building while rotating brought the bit upward 2' of TVD to 10,855'. At 17,015' a slide was initiated to attempt to push the bit back under dip. At 17,030' while sliding 160L rates of penetration increased from 2.1 minutes per foot to 1.13 minutes per foot, and weight on bit dropped off, which are classic signs of a shale strike. The driller was forced to stop drilling at 17,079' because he was unable to rotate ahead. A bottoms up was circulated confirming a shale strike. The approximate TVD of the shale strike was 10,855.77'. Considering we had previously drilled deeper than this, along with the fact that we were chasing a -2.70º down dip and confronted the shale with an inclination of 89.77º it was originally thought that it was the Upper Bakken Shale. Upon further investigation Geology was indecisive about which shale had been contacted. Recent dip calculation and bit inclination were suggestive of an Upper Bakken strike, but regional structure indicated a Lower Bakken Shale strike.

A fifth sidetrack was started at 16,825' and drilled to a depth of 16,834' at which point it was abandoned due the indecisiveness of the previous shale strike.

Oasis Geologists reached out to Sunburst Geology and the question of differentiating Upper from Lower Bakken Shale was asked as well as if minerals were present in sample cuttings that would prove the presence of a fault. Sunburst Geology went through all the of the shale samples that were onsite and concluded that there were no minerals out of the ordinary, no visible indications of coming into contact with a fault, and general lithology of both shales was too similar to distinguish between the two. Oasis requested to have the samples pulled from the Lower Bakken Shale strike while coming into the first lateral lab tested against the shale strike samples in the sidetracks. The Lower Bakken Shale samples were inspected, however the low quality and quantity of actual shale in those cuttings made extensive testing implausible. With the inability to distinguish between the shales through sample cuttings and gamma signature, the decision was made by Oasis to drill a sixth sidetrack at a depth between both known shales and proceed ahead cautiously.

At 16,235' Sidetrack #6 was drilled off of Sidetrack #4. The sidetrack was initially drilled downward dropping in TVD by 8'. 15' surveys were taken at this time and Sunburst was in contact with Oasis Operations Geologist after each survey, as well as drilling superintendents. Per discussion with the drilling superintendent Sunburst requested that the wellbore was not dropped past a depth of 10,855' TVD as to avoid the depth at which the previous shale strike took place and the Oasis drilling superintendent agreed, at an approximate MD of 16,450' and TVD of 10,850' the wellbore was leveled off with hopes to contact a recognizable gamma signature and calculate dip rate. As the wellbore was drilled ahead gamma closely resembled that of near to under target center. As drilling continued with near flat inclinations gamma

became non-descript, which was most indicative of moving through the lower half of target. At this point it was concluded that the previous shale strike was that of the Lower Bakken and a dip reversal took place. Near 17,100' a stop card was pulled by Sunburst Geology. Knowing the TVD of the Lower Bakken Shale was at 10,855' and having data suggestive of dip rolling over, becoming upward of more than 1º, it was imperative to slide up immediately to avoid another Lower Bakken strike. A sliding plan was then put in place with directional and the wellbore was safely veered back into target following a dip of +1.18º. As the wellbore ascended through target gamma overlaid near perfectly with the type log. Using the method of rotating and allowing the bit to gently build followed by a down slide, and gentle descent it was possible to find repeating gamma markers with indisputable dip calculations. Gamma markers mirrored the type log from 20,243' to 20,780' while descending almost the entire target confirming our correct position. Upon reaching TD the wellbore was just above the base of target.

Throughout each sidetrack regardless of position in zone the assembly consistently built inclination on rotation. There did not appear to be any noticeable hard streaks or intervals that were more or less favorable in relation to ROP. Drilling parameters proved to be the best and most reliable indication of a shale strike. It was impossible to pinpoint stratigraphic position or proximity to shales on sample cuttings alone, nor was it possible to differentiate an upper from lower shale strike.

The Lewis Federal 5300 11-31 4BR had an estimated overall formation dip of approximately -0.40º, which resulted in a shallower gross dip than that of the Lewis Federal 5300 11-31 3B. Local formation was much more severe from 5,000' VS to 6,000' VS, with averaged dips of -1.30º. From 6,000' VS to 8,000' VS unexpected up dips averaging +0.50º were present, follow by an average dip of -0.73º to TD. The lateral was drilled in 23 days from casing exit to total depth, with 13 lateral assemblies. A total depth of 20,780' MD was achieved at 20:45 hours on March 29, 2019.

Hydrocarbon Shows

Gas was continuously recorded from 3,650' to the completion of the lateral, along with the monitoring of free oil at the possum belly and shakers. In the closed mud system, hydrostatic conditions were maintained near balance, this allowed gas and fluid gains from the well to be evaluated. During the vertical, gas shows ranged from 10 to 1,145 units, against a 10.4 to 12.9 pound per gallon (PPG) diesel-invert, mud weight. Background concentrations in the lateral ranged from 200 to 3,000 units while several shows exceeded 3,500u. Upon starting Sidetrack #4 at 14,500' the gas buster was turned on, gases averaged 1,000 to 3,000 units after that point, against a 9.35-9.6 PPG saltwater gel drilling fluid. Chromatography of gas revealed typical concentrations of methane, ethane and propane characteristic of the Middle Bakken. Sample cuttings were examined for hydrocarbon "cut" by immersion of trichloroethylene and inspection under a UV fluoroscope. *Fluorescent cuts were generally pale yellow in color and had a diffuse habit at a slow to moderate speed*. *Visible green oil sheen* was present at the shakers while drilling Sidetrack #6, as well as a bright orange 5'-10' intermittent flare. While tripping at 20,195' a forceful, almost geyser-like flare was present of 20'+, along with *large amounts of green oil at the shaker* (**Figures 5** and **6** next page).

Figure 5. Oil at shakers and flare from trip at 20,195'.

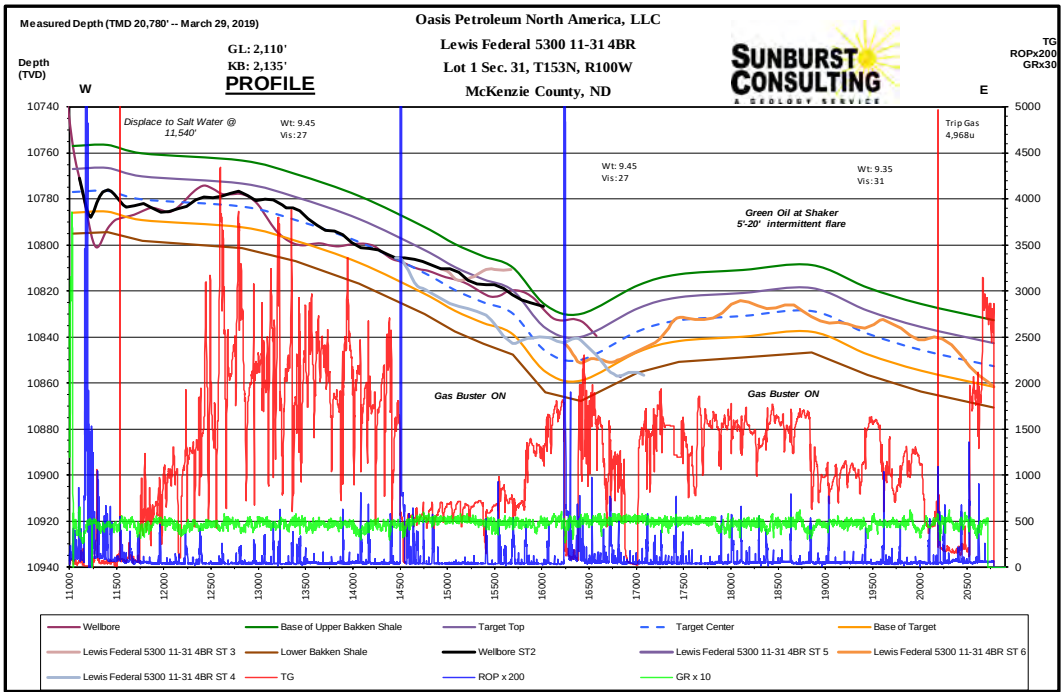

Figure 6. Cross-sectional profile of the Lewis Federal 5300 11-31 34BR displaying stratigraphic position, total gas, rate of penetration and gamma values.

Lessons Learned

While drilling Sidetrack #2 the accuracy of surveys and calculated TVD came into question. When there is an initial curve landing and drill out that produces severe dog legs, the accuracy of calculated TVD can have a large factor on TVD error. As a result, it's possible to have two wells drilled at the same TVD but at completely different portions of target, or in this case the shale. It's always best to just "drill the well you're on". Forcing gamma overlays to match with previously drilled wellbores can spell disaster quickly. The further you drill out, closing in on TD, makes the survey accuracy even worse. Drilling a lateral with intentions to TD at a certain TVD based on offset control, can be helpful at times, but should rarely outweigh

a recent, confident gamma correlation tied to a nearby stratigraphic type log. Projected structure should always be changed to actual apparent dip, based on recorded data.

Extensive testing, as suggested by Oasis, should be done on Upper Bakken and Lower Bakken samples in the near future. This testing could have prevented Sidetrack #3 along with much of the confusion of the shale strike terminating Sidetrack #4.

When following steep local dips, it's best to stop after a substantial amount of TVD has been drilled to reevaluate the situation and recalculate dip. It's imperative to catch and follow local structure, keeping regional structure in mind as well to anticipate any changes.

Finally, no matter how many wells are drilled on a pad, it does not mean that the subject well is going to follow that same structure. Following calculated structure known to be true with the data available is always best, as well as using regional dip as a secondary tool. Ignoring current gamma correlations to follow TVD targets based off control wells can be disastrous over great distances as TVD error compounds with each survey.

Summary

The *Lewis Federal 5300 11-31 4BR* is a well in Oasis Petroleum's horizontal Middle Bakken Member development program, in McKenzie County, North Dakota. The project was drilled from surface casing to total depth in 40 days. A total depth of 20,780' MD was achieved at 20:45 hours on 29 March 2019. The well-site team worked together to maintain the final sidetrack in the desired target interval for 97% within target.

Samples in the Middle Bakken Member are predominantly silty sandstone. These samples are light to medium gray, light brown, and occasionally cream silty sandstone. The silty sandstone is fine to very fine grained. The middle member typically contains sub round and occasionally sub-angular grains. Samples are smooth, moderately sorted and poorly cemented by calcite. Rare quantities of disseminated and nodular pyrite are present as is trace to fair intergranular porosity. Trace to rare light-medium brown, spotty oil stain was visible in most of these samples. The overall hydrocarbon "cuts", gas and hydrocarbon shows were encouraging and indicate an oil and gas rich system in the Middle Bakken Member.

The *Oasis Petroleum North America, LLC, Lewis Federal 5300 11-31 4BR* awaits completion operations to determine its ultimate production potential and commercial value.

Respectfully,

Dillon Johnson

Operator:	Oasis Petroleum North America, LLC
Well:	Lewis Federal 5300 11-31 4BR ST 1
Surface Coordinates:	1,149' FNL & 257' FWL
Surface Location:	Lot 1 Sec. 31, T153N, R100W
County, State:	McKenzie County, ND
Bottom Hole Location:	Hole was reamed off, creating wellbore. Unsure of the actual depth sidetrack 1 started or ended.

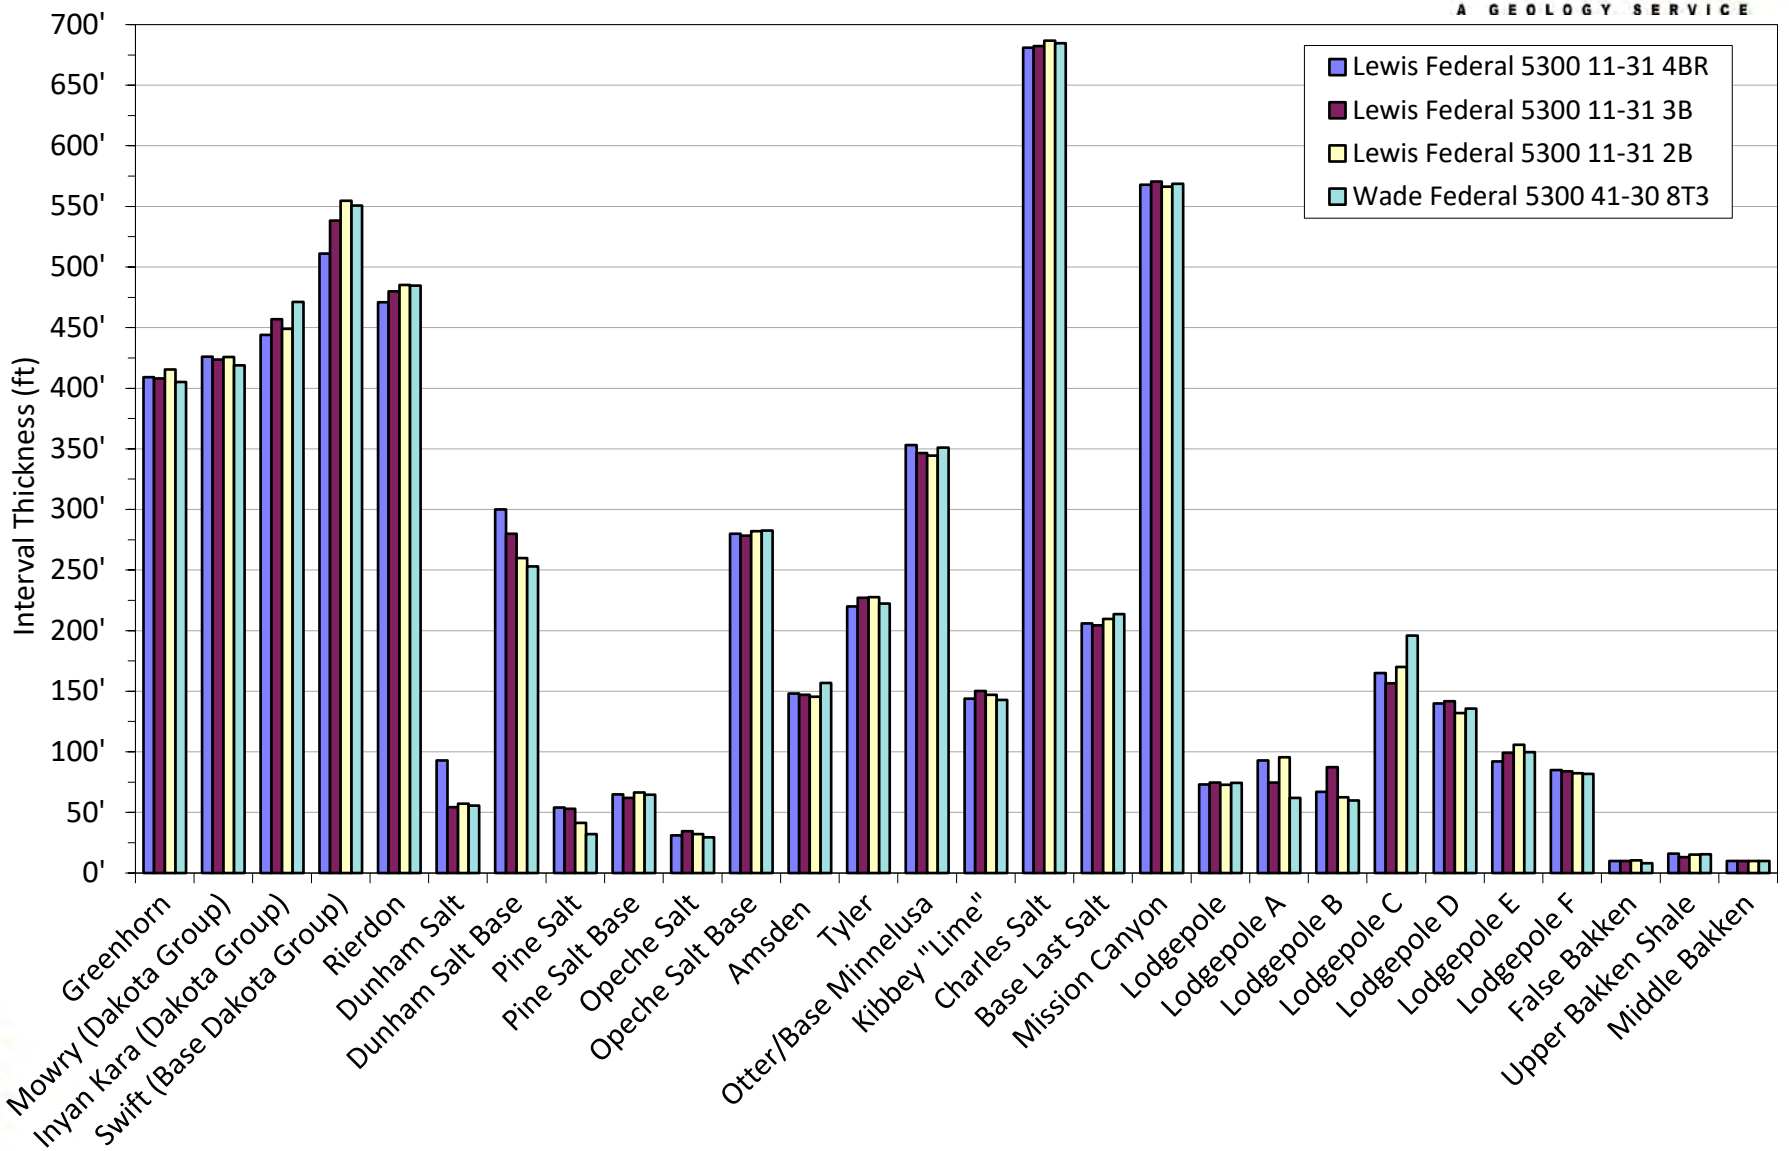
INTERVAL THICKNESS

Oasis Petroleum North America LLC - Lewis Federal 5300 11-31 4BR



LITHOLOGY

Oasis Petroleum North America, LLC

Lewis Federal 5300 11-31 4BR

Sunburst geologists caught 50' sample intervals from 3,650'-6,150'; 30' sample intervals from 8,260' to 11,152'; 1'-5' sample intervals while side-tracking/time drilling; and 50' sample intervals through the lateral to TD at 20,780'. Additional spot samples were caught through the vertical, curve, and lateral as needed. Side-track depths, formation tops, and lithologic markers have been inserted into the sample descriptions below for reference. Samples were examined wet and dry under a binocular microscope. Sample fluorescent cuts are masked by invert mud through 11,540', at which time the drilling fluid was displaced to Salt Water. Quantifiers in order of increasing abundance are trace, rare, occasional, common and abundant. One set of sample cuttings were packaged and mailed to the North Dakota Geological Survey Core Library, per state requirement, with the exception of side-track #1.

Vertical Log Descriptions: **MD / TVD (MSL Datum)**

Drilling in the Pierre Formation [Upper Montana Group]

3,650-3,700 SHALE: light-medium gray, very soft, platy, earthy texture, calcareous, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,700-3,750 SHALE: medium gray, very soft, platy, earthy texture, calcareous, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,750-3,800 SHALE: medium gray, very soft, platy, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,800-3,850 SHALE: light-medium gray, soft-very soft, platy, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,850-3,900 SHALE: light-medium gray, soft-very soft, platy, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,900-3,950 SHALE: medium gray, very soft, platy, earthy texture, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

3,950-4,000 SHALE: light-medium gray, soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,000-4,050 SHALE: light-medium gray, soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,050-4,100 SHALE: light-medium gray, soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,100-4,150 SHALE: medium gray, trace dark gray, soft-very soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,150-4,200 SHALE: light-medium gray, soft, sub platy, rare sub blocky, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain; trace BENTONITE: white, firm, sub-platy, waxy, no visible porosity

4,200-4,250 SHALE: medium gray, trace dark gray, soft-very soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,250-4,300 SHALE: light-medium gray, very soft, platy, earthy texture, sandy in part, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain

4,300-4,350 SHALE: medium gray, very soft, platy, earthy texture, calcareous, very fine grained, sandy in part, no visible porosity, no visible oil stain

4,350-4,400 SHALE: medium gray, very soft, platy, earthy texture, calcareous, very fine grained, sandy in part, no visible porosity, no visible oil stain

4,400-4,450 SHALE: light-medium gray, very soft, platy, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

4,450-4,500 SHALE: light-medium gray, very soft, platy, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

4,500-4,550 SHALE: medium gray, very soft, platy, rare sub blocky, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

4,550-4,600 SHALE: medium gray, very soft, platy, rare sub blocky, earthy texture, calcareous, trace carbonaceous flakes, very fine grained, sandy in part, no visible porosity, no visible oil stain

Greenhorn [Upper Colorado Group] ***4,619' MD / 4,612' TVD (-2,477')***

4,600-4,650 SHALE: light-medium gray, firm, sub-platy, earthy texture, slightly calcareous, slightly silty, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity, no visible oil stain; trace LIMESTONE: mudstone, cream, off white, trace light gray, microcrystalline, firm, rare friable, laminated, no visible porosity, no visible oil stain

4,650-4,700 SHALE: light gray, occasional medium gray, trace light brown gray, firm, sub platy to sub blocky, earthy texture, slightly calcareous, no visible porosity

4,700-4,750 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity

4,750-4,800 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity

4,800-4,850 SHALE: dark-medium gray, trace dark brown, firm, sub-platy to sub-blocky, earthy texture, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity

4,850-4,900 SHALE: dark-medium gray, trace dark brown, firm, sub-platy to sub-blocky, earthy texture, rare carbonaceous flakes, trace disseminated pyrite, no visible porosity

4,900-4,950 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity

4,950-5,000 SHALE: medium-dark gray, firm, sub-platy to sub-blocky, earthy texture, sandy in part, rare carbonaceous flakes, rare disseminated pyrite, no visible porosity

5,000-5,050 SHALE: medium-dark gray, firm, sub-platy to sub-blocky, earthy texture, sandy in part, rare disseminated pyrite, no visible porosity

5,050-5,100 SHALE: dark-medium gray, rare light gray, firm, sub-platy to sub-blocky, earthy texture, sandy in part, rare disseminated pyrite, no visible porosity

5,100-5,150 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity

5,150-5,200 SHALE: dark-medium gray, rare light gray, firm, sub-platy, earthy texture, sandy in part, no visible porosity;

5,200-5,250 SHALE: dark-medium gray, rare light gray, firm, sub-platy, earthy texture, sandy in part, no visible porosity;

5,250-5,300 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity

5,300-5,350 SHALE: light-medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity; rare SILTSTONE: gray, friable, sub-blocky, silica cement, possible porosity

5,350-5,400 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare disseminated pyrite, no visible porosity; trace SILTSTONE: gray, friable, sub-blocky, silica cement, possible porosity

5,400-5,450 SHALE: medium gray brown, firm, sub platy to sub blocky, earthy texture, slightly calcareous, trace carbonaceous flakes, rare disseminated pyrite, no visible porosity; rare SILTSTONE: light gray, friable, sub-blocky, calcareous cement, possible porosity

5,450-5,500 SHALE: medium gray brown, rare light gray, firm, sub platy to sub blocky, earthy texture, slightly calcareous, trace carbonaceous flakes, rare disseminated pyrite, no visible porosity; rare SILTSTONE: light gray, friable, sub-blocky, calcareous cement, possible porosity

5,500-5,550 SHALE: medium gray brown, rare light gray, firm, sub platy to sub blocky, earthy texture, slightly calcareous, rare carbonaceous flakes, rare disseminated pyrite, no visible porosity; rare SILTSTONE: light gray, friable, sub-blocky, calcareous cement, possible porosity

5,550-5,600 SHALE: light-medium gray, trace dark gray, firm, trace soft, sub platy, trace sub blocky, earthy texture, slightly calcareous, rare carbonaceous flakes, rare disseminated pyrite, no visible porosity, no visible oil stain; rare SILTSTONE: light gray, trace medium gray, trace cream, friable, trace friable, sub-blocky, calcareous cement, moderately cement, no visible porosity, no visible oil stain

5,600-5,650 SHALE: light-medium gray, trace dark gray, firm, trace soft, sub platy, trace sub blocky, earthy texture, slightly calcareous, no visible porosity, no visible oil stain; rare SILTSTONE: light gray, trace medium gray, trace cream, friable, trace friable, sub-blocky, calcareous cement, moderately cement, no visible porosity, no visible oil stain

5,650-5,700 SILTSTONE: light-medium gray, medium gray brown, rare cream, firm-friable, sub-blocky, earthy texture, sandy in part, silty in part, rare disseminated pyrite, no visible porosity, no visible oil stain; rare SANDSTONE: tan, off white, light gray, frosted, very fine-fine grained, firm, sub-rounded, moderately sorted, dolomitic cement, very poorly cemented, silty in part, possible intergranular porosity, no visible oil stain

5,700-5,750 SANDSTONE: tan, off white, trace light brown gray, frosted, very fine-fine grained, firm, sub-rounded, moderately sorted, dolomitic cement, very poorly cemented, silty in part, possible intergranular porosity, no visible oil stain

5,750-5,800 SANDSTONE: tan, off white, rare light gray, frosted, fine grained, firm, sub-rounded, moderately sorted, dolomitic cement, very poorly cemented, silty in part, possible intergranular porosity, no visible oil stain; trace SILTSTONE: light-medium gray, firm, sub-blocky, earthy texture, sandy in part, silty in part, no visible porosity, no visible oil stain; trace SHALE: light-medium gray, rare light brown gray, firm, sub platy to sub blocky, earthy texture, slightly calcareous, trace carbonaceous flakes, rare disseminated pyrite, no visible porosity

5,800-5,850 SILTSTONE: light-medium gray, medium gray brown, rare cream, firm-friable, sub-blocky, earthy texture, sandy in part, silty in part, rare disseminated pyrite, no visible porosity, no visible oil stain; trace SHALE: medium-light gray, trace dark gray, soft rare firm, sub platy, trace sub blocky, earthy texture, slightly calcareous, no visible porosity, no visible oil stain

5,850-5,900 No Sample

5,900-5,950 SILTSTONE: light-medium gray brown, occasional light gray, firm-friable, sub-blocky, earthy texture, sandy in part, silty in part, rare disseminated pyrite, no visible porosity, no visible stain; trace SANDSTONE: tan, cr, rare light gray, occasional light brown, fine grained, firm, sub rounded, moderately sorted, dolomitic cement, very poorly cemented, silty in part, possible intergranular porosity, no visible oil stain

5,950-6,000 SILTSTONE: light-medium gray, cream, firm-friable, sub-blocky, earthy texture, sandy in part, silty in part, rare disseminated pyrite, no visible porosity, no visible stain

6,000-6,050 SILTSTONE: light-medium gray, rare dark gray, trace light gray brown, firm, sub-blocky, earthy texture, sandy in part, silty in part, trace disseminated pyrite, no visible porosity, no visible stain

6,050-6,100 SILTSTONE: light-medium gray, cream, firm, occasional friable, sub-blocky, earthy texture, sandy in part, silty in part, rare disseminated pyrite, no visible porosity, no visible stain

Drilling in the Otter Formation [Mississippian Big Snowy Group] 8,124' MD / 8,064' TVD (-5,929')

8,260-8,290 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: light gray-gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,290-8,320 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,320-8,350 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,350-8,380 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,380-8,410 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,410-8,440 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

8,440-8,470 SILTSTONE: light red orange, gray, firm, sub blocky, calcareous cement, well cemented, no visible porosity, no visible oil stain; common SILTY SANDSTONE: gray, trace off white, very fine-fine grained, sub rounded, moderately sorted, calcite cement, poorly cemented, no visible porosity, no visible oil stain

Kibbey "Lime" [Mississippian Big Snowy Group] 8,478' MD / 8,417' TVD (-6,282')

8,470-8,500 SILTSTONE and SILTY SANDSTONE: as above; ANHYDRITE off white, microcrystalline, soft, chalky, massive, anhedral, amorphous; no visible porosity, no visible oil stain;

8,500-8,530 SILTSTONE: red brown, dark rounded, firm, sub blocky, calcareous cement, poorly-moderately cemented, no visible porosity; trace SILTY SANDSTONE: light-medium gray, very fine grained, friable, calcareous, poorly-moderately cemented, no visible porosity, no visible oil stain

8,530-8,560 SILTSTONE: orange brown, soft, blocky-sub platy, calcareous cement, well sorted, no visible porosity

8,560-8,590 SILTSTONE: red brown, dark rounded, firm, sub blocky, calcareous cement, poorly-moderately cemented, no visible porosity; trace SILTY SANDSTONE: light-medium gray, very fine grained, friable, calcareous, poorly-moderately cemented, no visible porosity, no visible oil stain

8,590-9,620 SILTSTONE: red brown, dark orange, firm, occasional friable, sub blocky, calcareous cement, poorly-moderately cemented, no visible porosity, no visible oil stain; rare LIMESTONE: mudstone, cream, common light-medium gray, rare tan, microcrystalline, firm, earthy texture, no visible porosity, no visible oil stain; rare SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

Charles Formation [Mississippian Madison Group] 8,622' MD / 8,561' TVD (-6,426')

8,620-8,650 LIMESTONE: mudstone, cream, common light-medium gray, rare tan, microcrystalline, firm, earthy texture, no visible porosity, no visible oil stain; rare SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,650-8,680 SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,680-8,710 LIMESTONE: mudstone, light brown gray, medium-light gray, common cream, microcrystalline, firm, trace friable, earthy texture, no visible porosity, no visible oil stain; occasional SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,710-8,740 SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,740-8,770 SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,770-8,800 SALT: translucent, common milky white, firm, hard, crystalline, massive, anhedral, no visible porosity; trace LIMESTONE: mudstone, medium-light gray, light brown gray, tan, earthy texture, friable, common firm, no visible porosity

8,800-8,830 LIMESTONE-ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, medium-light gray, light brown gray, tan, trace dark gray, earthy texture, friable, common firm, argillaceous in part, no visible porosity

8,830-8,860 LIMESTONE: mudstone, medium-light gray, light brown gray, tan, earthy texture, friable, common firm, no visible porosity; trace ANHYDRITE: milky white, cream, microcrystalline, soft, amorphous, no visible porosity

8,860-8,890 SALT: milky white, firm, hard, crystalline, massive, anhedral, no visible porosity; rare LIMESTONE: mudstone, medium-light gray, light brown gray, tan, earthy texture, friable, common firm, no visible porosity

8,890-8,920 DOLOMITIC LIMESTONE: mudstone, tan, light gray, rare cream, microcrystalline, firm, common friable, earthy-crystalline texture, no visible porosity; rare SALT: translucent, rare milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

8,920-8,950 DOLOMITIC LIMESTONE: mudstone, cream, tan, medium-light gray, earthy texture, friable, no visible porosity; rare ANHYDRITE: milky white, cream, rare light gray, microcrystalline, soft, amorphous, no visible porosity

8,950-8,980 SALT: milky white, firm, hard, crystalline, massive, anhedral, no visible porosity; rare ANHYDRITE: milky white, cream, rare light gray, microcrystalline, soft, amorphous, no visible porosity

8,980-9,010 SALT: milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

9,010-9,040 ARGILLACEOUS LIMESTONE: mudstone, light brown gray, medium-dark gray, cream, microcrystalline, firm, trace friable, dense, earthy texture, rare crystalline texture, no visible porosity

9,040-9,070 DOLOMITE: mudstone, cream, tan, rare light gray, friable, common firm, crystalline texture, no visible porosity, no visible oil stain; trace ANHYDRITE: milky white, microcrystalline, soft, amorphous, no visible porosity, no visible oil stain

9,070-9,100 LIMESTONE: mudstone, light gray, tan, trace medium gray, earthy texture, friable, common firm, no visible porosity; trace ANHYDRITE: milky white, cream, rare light gray, microcrystalline, soft, amorphous, no visible porosity

9,100-9,130 LIMESTONE: mudstone, medium-light gray, light brown gray, tan, earthy texture, friable, common firm, no visible porosity; rare ANHYDRITE: milky white, cream, rare light gray, microcrystalline, soft, amorphous, no visible porosity

9,130-9,160 LIMESTONE: mudstone, cream, occasional medium-light gray, rare light brown gray, trace tan, earthy texture, friable, common firm, no visible porosity

9,160-9,190 DOLOMITE: mudstone, tan, light brown gray, microcrystalline, firm-hard, dense-banded, crystalline-sucrosic texture, argillaceous in part, no visible porosity

9,190-9,220 LIMESTONE: mudstone, tan, cream, light-medium gray, microcrystalline, firm-hard, dense-banded, crystalline-sucrosic texture, argillaceous in part, no visible porosity; occasional ANHYDRITE: off white, tan, microcrystalline, firm-soft, massive, amorphous, no visible porosity

9,220-9,250 LIMESTONE: mudstone, cream, light gray, microcrystalline, firm, rare friable, earthy texture, no visible porosity; common ARGILLACEOUS LIMESTONE: mudstone, occasional wackestone, light-medium gray, tan, off white, microcrystalline, firm-hard, dense, bedded, earthy texture, no visible porosity

9,250-9,280 LIMESTONE: mudstone, cream, light gray, microcrystalline, firm, rare friable, earthy texture, no visible porosity; common ARGILLACEOUS LIMESTONE: mudstone, occasional wackestone, light-medium gray, tan, off white, microcrystalline, firm-hard, dense, bedded, earthy texture, no visible porosity

9,280-9,310 SALT: translucent, rare milky white, firm, hard, crystalline, massive, anhedral, no visible porosity

Base of Last Salt [Charles Formation] ***9,304' MD / 9,242' TVD (-7,107')***

10,240-10,270 ARGILLACEOUS LIMESTONE: mudstone, light-medium gray, light brown, microcrystalline, firm, dense, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,270-10,300 ARGILLACEOUS LIMESTONE: mudstone, light-medium gray, light brown, microcrystalline, firm, dense, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

Horizontal Log Descriptions: MD / TVD (MSL Datum)

10,300-10,330 ARGILLACEOUS LIMESTONE: mudstone, dark brown, medium-light gray, rare cream, rare calcite fill, firm, trace hard, microcrystalline texture, earthy texture, no visible porosity, no visible oil stain

10,330-10,360 ARGILLACEOUS LIMESTONE: mudstone, dark brown, medium-light gray, rare cream, rare calcite fill, firm, trace hard, microcrystalline texture, earthy texture, no visible porosity, no visible oil stain

10,360-10,390 ARGILLACEOUS LIMESTONE: mudstone, dark brown, medium-light gray, rare cream, rare calcite fill, firm, trace hard, microcrystalline texture, earthy texture, no visible porosity, no visible oil stain

10,390-10,420 ARGILLACEOUS LIMESTONE: mudstone, medium-light gray, firm, earthy texture, no visible porosity, no visible oil stain

10,420-10,450 ARGILLACEOUS LIMESTONE: mudstone, medium-light gray, firm, earthy texture, no visible porosity, no visible oil stain

10,450-10,480 ARGILLACEOUS LIMESTONE: mudstone, medium-light gray, firm, earthy texture, no visible porosity, no visible oil stain

10,480-10,510 ARGILLACEOUS LIMESTONE: mudstone, medium-light gray, firm, earthy texture, no visible porosity, no visible oil stain

10,510-10,540 ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, medium-light gray, occasional light brown gray, rare dark gray, trace cream, firm, occasional friable, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,540-10,570 ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, medium-light gray, occasional light brown gray, rare dark gray, trace cream, firm, occasional friable, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,570-10,600 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, light brown gray, medium-dark gray, rare light gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,600-10,630 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, light brown gray, medium-dark gray, rare light gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,630-10,660 ARGILLACEOUS LIMESTONE: mudstone, trace wackestone, light brown gray, common tan, rare medium-dark gray, trace light gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,660-10,690 ARGILLACEOUS LIMESTONE: mudstone, trace wackestone, light brown gray, common tan, rare medium-dark gray, trace light gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,690-10,720 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, dark-medium gray, common light brown gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,720-10,750 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, dark-medium gray, common light brown gray, firm, microcrystalline, earthy texture, trace disseminated pyrite, no visible porosity, no visible oil stain

10,750-10,780 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, dark-medium gray, common light brown gray, rare light gray, trace cream, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,780-10,810 ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, tan, light brown gray, medium-light gray, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,810-10,840 ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, tan, light brown gray, medium-light gray, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,840-10,870 ARGILLACEOUS LIMESTONE: mudstone, occasional wackestone, light brown gray, medium-dark gray, rare light gray, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,870-10,900 ARGILLACEOUS LIMESTONE: mudstone, occasional wackestone, light brown gray, medium-dark gray, rare light gray, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,900-10,930 ARGILLACEOUS LIMESTONE: mudstone, rare wackestone, cream, light brown gray, light-medium gray, trace dark gray, firm, microcrystalline, earthy texture, rare disseminated pyrite, no visible porosity, no visible oil stain

10,930-10,960 ARGILLACEOUS LIMESTONE: mudstone, common wackestone, dark-medium gray, common light brown gray, firm, microcrystalline, earthy texture, no visible porosity, no visible oil stain

False Bakken [Lodgepole Formation] 10,961' MD / 10,731' TVD (-8,596')

10,960-10,990 LIMESTONE: mudstone, cream, tan, rare light gray, firm, microcrystalline, earthy texture, no visible porosity, no visible oil stain; SHALE: dark gray-black, hard, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

Upper Bakken Shale Member [Mississippian-Bakken Formation] 10,987' MD / 10,741' TVD (-8,606')

10,990-11,020 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

Middle Bakken Member [Mississippian-Devonian Bakken Formation] 11,037' MD / 10,757' TVD (-8,622')

11,020-11,050 SILTY SANDSTONE: light-medium gray, light brown gray-light brown, firm, friable, fine grained, sub-rounded, moderately poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; SHALE: as above

11,050-11,080 SILTY SANDSTONE: light-medium gray, light brown gray-light brown, firm, friable, fine grained, sub-rounded, moderately poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,080-11,170 No sample

11,170-11,200 SILTY SANDSTONE: light-medium gray, occasional off white, trace light brown gray, firm, fine grained, sub-rounded, trace sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence; rare CEMENT

Lower Bakken Shale [Devonian Bakken Formation] 11,231' MD / 10,796' TVD (-8,661')

11,200-11,250 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated cut fluorescence

11,250-11,300 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated cut fluorescence

11,300-11,350 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated cut fluorescence

Middle Bakken Member [Mississippian-Devonian Bakken Formation] 11,375' MD / 10,795' TVD (-8,660')

11,350-11,400 SILTY SANDSTONE: light-medium gray, trace dark gray, firm, fine grained, sub-rounded, occasional sub-angular moderately, poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,400-11,450 SILTY SANDSTONE: light-medium gray, trace dark gray, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,450-11,500 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,500-11,550 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,550-11,600 SILTY SANDSTONE: light gray, occasional light gray brown, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,600-11,650 SILTY SANDSTONE: light gray, occasional light gray brown, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,650-11,700 SILTY SANDSTONE: medium-dark gray, common light gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,700-11,750 SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace light brown, trace tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,750-11,800 SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace light brown, trace tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,800-11,850 SILTY SANDSTONE: light gray, occasional medium-dark gray, trace light brown, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,850-11,900 SILTY SANDSTONE: light gray, occasional medium-dark gray, trace light brown, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,900-11,950 SILTY SANDSTONE: medium-light gray, rare tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

11,950-12,000 SILTY SANDSTONE: medium-light gray, rare tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,000-12,050 SILTY SANDSTONE: light gray, off white, rare medium-dark gray, trace light gray brown, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,050-12,100 SILTY SANDSTONE: light gray, off white, rare medium-dark gray, trace light gray brown, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,100-12,150 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,150-12,200 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,200-12,250 SILTY SANDSTONE: light brown gray, medium-light gray, rare dark gray, trace off white, firm, fine grained, sub-rounded, trace sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,250-12,300 SILTY SANDSTONE: light brown gray, medium-light gray, rare dark gray, trace off white, firm, fine grained, sub-rounded, trace sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,300-12,350 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,350-12,400 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,400-12,450 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,450-12,500 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,500-12,550 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,550-12,600 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,600-12,650 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,650-12,700 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

12,700-12,750 SILTY SANDSTONE: light-medium brown, brown gray, rare medium-light gray, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

12,750-12,800 SILTY SANDSTONE: medium-light brown, brown gray, rare medium-light gray, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

12,800-12,850 SILTY SANDSTONE: medium-light brown, brown gray, rare medium-light gray, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

12,850-12,900 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

12,900-12,950 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

12,950-13,000 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,000-13,050 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,050-13,100 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,100-13,150 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,150-13,200 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,200-13,250 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,250-13,300 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,300-13,350 SILTY SANDSTONE: light-medium brown, brown gray-gray, trace cream, firm, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, rare light-medium brown spotty oil stain; slightly pale yellow diffuse cut fluorescence

13,350-13,400 SILTY SANDSTONE: light brown-gray, medium-dark gray, rare light brown gray, firm, trace hard, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,400-13,450 SILTY SANDSTONE: medium-dark gray, rare light brown gray, firm, trace hard, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,450-13,500 SILTY SANDSTONE: medium-light gray, light brown gray, rare cream, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,500-13,550 SILTY SANDSTONE: medium-light gray, light brown gray, rare cream, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,550-13,600 SILTY SANDSTONE: medium-light gray, light brown gray, rare cream, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,600-13,650 SILTY SANDSTONE: cream, light gray, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,650-13,700 SILTY SANDSTONE: cream, light gray, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,700-13,750 SILTY SANDSTONE: light brown gray, common medium-light gray, trace dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,750-13,800 SILTY SANDSTONE: light brown gray, common medium-light gray, trace dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

13,800-13,850 SILTY SANDSTONE: cream, light gray, medium-light gray, trace off white, firm, fine grained, sub-rounded, common sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

13,850-13,900 SILTY SANDSTONE: cream, light gray, medium-light gray, trace off white, firm, fine grained, sub-rounded, common sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

13,900-13,950 SILTY SANDSTONE: cream, light gray, medium-light gray, trace off white, firm, fine grained, sub-rounded, common sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

13,950-14,000 SILTY SANDSTONE: medium-light gray, light brown gray, firm, fine grained, sub-rounded, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,000-14,050 SILTY SANDSTONE: medium-light gray, light brown gray, firm, fine grained, sub-rounded, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,050-14,100 SILTY SANDSTONE: medium-light gray, light brown gray, firm, fine grained, sub-rounded, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,100-14,150 SILTY SANDSTONE: medium-light gray, occasional light brown gray, rare dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,150-14,200 SILTY SANDSTONE: medium-light gray, occasional light brown gray, rare dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,200-14,250 SILTY SANDSTONE: medium-light gray, occasional light brown gray, rare dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,250-14,300 SILTY SANDSTONE: light brown gray, common medium-light gray, trace dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,300-14,350 SILTY SANDSTONE: light brown gray, common medium-light gray, trace dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, poorly-moderately cemented, trace disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,350-14,400 SILTY SANDSTONE: light-medium gray, occasional light brown gray, rare dark gray, firm, trace hard, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,400-14,450 SILTY SANDSTONE: light-medium gray, occasional light brown gray, rare dark gray, firm, trace hard, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,450-14,500 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,500-14,550 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,550-14,600 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,600-14,650 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,650-14,700 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,700-14,750 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,750-14,800 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

14,800-14,850 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,850-14,900 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,900-14,950 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

14,950-15,000 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,000-15,050 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,050-15,100 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,100-15,150 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,150-15,200 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,200-15,250 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,250-15,300 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,300-15,350 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,350-13,400 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,400-15,450 SILTY SANDSTONE: light brown, common light-medium gray, occasional tan, rare light brown gray, firm, trace friable, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,450-15,500 SILTY SANDSTONE: light brown, common light-medium gray, occasional tan, rare light brown gray, firm, trace friable, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,500-15,550 SILTY SANDSTONE: medium-light gray, occasional light brown gray, rare dark gray, trace tan, firm, fine grained, sub-rounded, rare sub-angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,550-15,600 SILTY SANDSTONE: light brown, common light-medium gray, occasional tan, rare light brown gray, firm, trace friable, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,600-15,650 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,650-15,700 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,700-15,750 SILTY SANDSTONE: light brown, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

15,750-15,800 SILTY SANDSTONE: light-medium brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,800-15,850 SILTY SANDSTONE: light-medium brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,850-15,900 SILTY SANDSTONE: light-medium brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,900-15,950 SILTY SANDSTONE: medium-light brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

15,950-16,000 SILTY SANDSTONE: medium-light brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,000-16,050 SILTY SANDSTONE: light-medium gray brown, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,050-16,100 SILTY SANDSTONE: light-medium gray brown, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,100-16,150 SILTY SANDSTONE: light-medium gray brown, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,150-16,200 SILTY SANDSTONE: light-medium gray brown, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,200-16,250 SILTY SANDSTONE: medium-light brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,250-16,300 SILTY SANDSTONE: medium-light brown, brown gray, rare gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,300-16,350 SILTY SANDSTONE: light-medium gray, common light brown, occasional light brown gray, rare cream, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,350-16,400 SILTY SANDSTONE: light brown, light-medium gray, light brown gray, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,400-16,450 SILTY SANDSTONE: light brown, light-medium gray, light brown gray, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,450-16,500 SILTY SANDSTONE: light brown, cream, light brown gray, rare medium-light gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

16,500-16,550 SILTY SANDSTONE: light brown, cream, light brown gray, rare medium-light gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

Side-track #1 Drilling in the Middle Bakken

No samples were caught in this sidetrack; unaware the bit was being reamed away from the existing lateral creating an unintentional sidetrack

Side-track #2 Drilling in the Middle Bakken

11,152-11,172 COMMON CEMENT, HCl: Non-reactive, Phenolphthalein: 100% Reactive, instantly purple

11,172-11,173 COMMON CEMENT to 10% SILTY SANDSTONE

11,173-11,174 COMMON CEMENT to 20% SILTY SANDSTONE

11,174-11,184 COMMON CEMENT to 45% SILTY SANDSTONE

11,184-11,188 COMMON CEMENT to 50% SILTY SANDSTONE

11,188-11,191 SILTY SANDSTONE to 15% COMMON CEMENT

11,191-11,198 SILTY SANDSTONE: light gray-light brown gray, very fine grained, firm-friable, sub-rounded, coated, moderately poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; fist sample out of side-track that was non-reactive to Phenolphthalein

11,198-11,200 SILTY SANDSTONE: light gray-light brown gray, very fine grained, firm-friable, sub-rounded, coated, moderately poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,200-11,205 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,205-11,210 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,210-11,215 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,215-11,220 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,220-11,225 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,225-11,230 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,230-11,235 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,235-11,240 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,240-11,245 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,245-11,250 SILTY SANDSTONE: light gray, light brown gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,250-11,300 SILTY SANDSTONE: light gray-light brown gray, light brown, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,300-11,350 SILTY SANDSTONE: light gray-light brown gray, light brown, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,350-11,400 SILTY SANDSTONE: light brown-gray brown, rare gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,400-11,450 SILTY SANDSTONE: light brown-gray brown, rare gray, very fine grained, firm, sub-rounded, coated, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,450-11,500 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,500-11,550 SILTY SANDSTONE: light-medium gray, occasional cream, rare light brown gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain

11,550-11,600 SILTY SANDSTONE: light gray, occasional light gray brown, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

11,600-11,650 SILTY SANDSTONE: light gray, occasional light gray brown, rare medium-dark gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

11,650-11,700 SILTY SANDSTONE: medium-dark gray, common light gray, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

11,700-11,750 SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace light brown, trace tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

11,750-11,800 SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace light brown, trace tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly-moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

11,800-11,850 SILTY SANDSTONE: light gray, occasional medium-dark gray, trace light brown, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

11,850-11,900 SILTY SANDSTONE: light gray, occasional medium-dark gray, trace light brown, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

11,900-11,950 SILTY SANDSTONE: medium-light gray, rare tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

11,950-12,000 SILTY SANDSTONE: medium-light gray, rare tan, firm, fine grained, sub-rounded, occasional sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

12,000-12,050 SILTY SANDSTONE: light gray, off white, rare medium-dark gray, trace light gray brown, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,050-12,100 SILTY SANDSTONE: light gray, off white, rare medium-dark gray, trace light gray brown, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,100-12,150 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,150-12,200 SILTY SANDSTONE: off white, light gray, tan, firm, fine grained, sub-rounded, rare sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,200-12,250 SILTY SANDSTONE: light brown gray, medium-light gray, rare dark gray, trace off white, firm, fine grained, sub-rounded, trace sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,250-12,300 SILTY SANDSTONE: light brown gray, medium-light gray, rare dark gray, trace off white, firm, fine grained, sub-rounded, trace sub-angular, moderately poorly sorted, calcareous cement, poorly cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,300-12,350 SILTY SANDSTONE: light brown gray, light brown, medium-light gray, cream, firm, hard, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

12,350-12,400 SILTY SANDSTONE: light brown gray, light brown, medium-light gray, cream, firm, hard, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace brown spotty oil stain; slow pale green-yellow diffuse cut fluorescence

12,400-12,450 SILTY SANDSTONE: light gray, medium-dark gray, rare light brown gray, firm, trace hard, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,450-12,500 SILTY SANDSTONE: light gray, medium-dark gray, rare light brown gray, firm, trace hard, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,500-12,550 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

12,550-12,600 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

12,600-12,650 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,650-12,700 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

12,700-12,750 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,750-12,800 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

12,800-12,850 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

12,850-12,900 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

12,900-12,950 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

12,950-13,000 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,000-13,050 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

13,050-13,100 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

13,100-13,150 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

13,150-13,200 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,200-13,250 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

13,250-13,300 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,300-13,350 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; moderately pale yellow diffuse cut fluorescence

13,350-13,400 SILTY SANDSTONE: light tan gray, gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow-moderately pale yellow diffuse cut fluorescence

13,400-13,450 SILTY SANDSTONE: light gray, tan gray, rare light brown, firm, very fine grained, sub rounded-sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; slow pale yellow diffuse cut fluorescence

13,450-13,500 SILTY SANDSTONE: light brown gray, rare light brown, firm, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,500-13,550 SILTY SANDSTONE: light gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,550-13,600 SILTY SANDSTONE: gray tan, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,600-13,650 SILTY SANDSTONE: light gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,650-13,700 SILTY SANDSTONE: light gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,700-13,750 SILTY SANDSTONE: light gray-gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,750-13,800 SILTY SANDSTONE: gray tan, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,800-13,850 SILTY SANDSTONE: light gray-gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,850-13,900 SILTY SANDSTONE: light gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

13,900-13,950 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

13,950-14,000 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,000-14,050 SILTY SANDSTONE: light gray brown, rare light brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; slightly yellow green diffuse cut fluorescence

14,050-14,100 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,100-14,150 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,150-14,200 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,200-14,250 SILTY SANDSTONE: light brown-gray brown, trace medium gray, firm-friable, very fine grained, sub rounded, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,250-14,300 SILTY SANDSTONE: light brown gray, light brown, rare medium-light gray, trace off white, firm, fine-very fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately-poorly cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,300-14,350 SILTY SANDSTONE: light brown gray, light brown, rare medium-light gray, trace off white, firm, fine-very fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately-poorly cemented, trace disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,350-14,400 SILTY SANDSTONE: light-medium gray, occasional light brown gray, rare dark gray, firm, trace hard, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,400-14,450 SILTY SANDSTONE: light-medium gray, occasional light brown gray, rare dark gray, firm, trace hard, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,450-14,500 SILTY SANDSTONE: off white, light brown, rare light-medium gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,500-14,550 SILTY SANDSTONE: off white, light brown, rare light-medium gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,550-14,600 SILTY SANDSTONE: light brown, occasional light brown gray, rare medium-light gray, trace cream, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,600-14,650 SILTY SANDSTONE: light brown, occasional light brown gray, rare medium-light gray, trace cream, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately

cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,650-14,700 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,700-14,750 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,750-14,800 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, rare sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,800-14,850 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,850-14,900 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,900-14,950 SILTY SANDSTONE: off white, light gray, occasional light brown, trace medium-dark gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

14,950-15,000 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,000-15,050 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,050-15,100 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,100-15,150 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,150-15,200 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,200-15,250 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,250-15,300 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,300-15,350 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,350-15,400 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,400-15,450 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,450-15,500 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,500-15,550 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,550-15,600 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,600-15,650 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,650-15,700 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,700-15,750 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,750-15,800 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,800-15,850 SILTY SANDSTONE: light brown, tan, light-medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,850-15,900 SILTY SANDSTONE: light gray-gray brown, rare medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

15,900-15,950 SILTY SANDSTONE: light gray-gray brown, rare medium gray, rare off white, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

Upper Bakken Shale ***15,947' MD / 10,826' TVD (-8,691')***

15,950-16,000 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

16,000-16,014 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

Side-track #3 Drilling in the Middle Bakken

14,990-15,050 SILTY SANDSTONE: light brown, light gray-tan, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,050-15,100 SILTY SANDSTONE: light brown, gray-tan, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,100-15,150 SILTY SANDSTONE: light-medium gray, light brown gray, tan, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; slow diffuse pale yellow stain

15,150-15,200 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,200-15,250 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,250-15,300 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,300-15,350 SILTY SANDSTONE: light-medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,350-15,400 SILTY SANDSTONE: light brown gray, medium gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,400-15,450 SILTY SANDSTONE: light brown gray, medium gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,450-15,500 SILTY SANDSTONE: light-medium brown gray, medium brown, medium gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,500-15,550 SILTY SANDSTONE: medium gray, rare medium brown, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,550-15,600 SILTY SANDSTONE: medium gray, rare medium brown, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

Upper Bakken Shale ***15,622' MD / 10,811' TVD (-8,676')***

15,600-15,650 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; SILTY SANDSTONE: medium gray, light brown gray, firm, fine grained, sub rounded, occasional sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, disseminated pyrite, nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain

15,650-15,669 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

Side-track #4 Drilling in the Middle Bakken

14,500-14,550 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,550-14,600 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,600-14,650 SILTY SANDSTONE: light brown-light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,650-14,700 SILTY SANDSTONE: light brown-light brown gray, rare gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,700-14,750 SILTY SANDSTONE: light brown-light brown gray, rare gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,750-14,800 SILTY SANDSTONE: light brown-light brown gray, rare gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,800-14,850 SILTY SANDSTONE: light gray-gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,850-14,900 SILTY SANDSTONE: light gray-gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,900-14,950 SILTY SANDSTONE: medium gray-gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

14,950-15,000 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,000-15,050 SILTY SANDSTONE: light gray-light gray brown, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,050-15,100 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,100-15,150 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,150-15,200 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,200-15,250 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,250-15,300 SILTY SANDSTONE: light gray-light gray brown, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,300-15,350 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,350-15,400 SILTY SANDSTONE: light gray-light gray brown, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare

disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,400-154,500 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,450-15,500 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,500-15,550 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,550-15,600 SILTY SANDSTONE: medium gray- light gray brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,600-15,650 SILTY SANDSTONE: light gray-light gray brown, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,650-15,700 SILTY SANDSTONE: light gray-light gray brown, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,700-15,750 SILTY SANDSTONE: gray brown, light gray, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,550-15,800 SILTY SANDSTONE: gray brown, light gray, trace medium gray, trace medium brown, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,800-15,850 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,850-15,900 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,900-15,950 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

15,950-16,000 SILTY SANDSTONE: light gray brown-gray, rare off white, firm-friable, fine grained, sub rounded, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

16,000-16,050 SILTY SANDSTONE: light brown-light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,050-16,100 SILTY SANDSTONE: light brown-light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,100-16,150 SILTY SANDSTONE: light brown-light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,150-16,200 SILTY SANDSTONE: light brown-light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,200-16,250 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,250-16,300 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,300-16,350 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,350-16,400 SILTY SANDSTONE: light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,400-16,450 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,450-16,500 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,500-16,550 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,550-16,600 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,600-16,650 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,650-16,700 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,700-16,750 SILTY SANDSTONE: light brown-light gray, tan gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,750-16,800 SILTY SANDSTONE: light brown-light gray, tan gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,800-16,850 SILTY SANDSTONE: light brown-light gray, tan gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,850-16,900 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,900-16,950 SILTY SANDSTONE: light gray, light brown gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,950-17,000 SILTY SANDSTONE: light brown gray-medium gray, trace light brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

Lower Bakken Shale ***17,030' MD / 10,856' TVD (-8,721')***

17,000-17,050 SILTY SANDSTONE: light brown gray-medium gray, trace light brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated

pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; common SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated with lubricant

17,050-17,079 SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain

Side-track #5 Drilling in the Middle Bakken

16825-16834 50% SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain (assumed to be up hole wash cuttings); 50% SILTY SANDSTONE: light brown-light gray, tan gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

Side-track #6 Drilling in the Middle Bakken

16,235-16,300 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated with lubricant

16,300-16,350 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated with lubricant

16,350-16,400 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated with lubricant

16,400-16,450 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; SHALE: black, hard, brittle, blocky, carbonaceous, petroliferous, pyritic, no visible porosity, possible fracture porosity, dark brown even oil stain; contaminated with lubricant

16,450-16,500 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,500-16,550 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,550-16,600 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,600-16,650 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,650-16,700 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,700-16,750 SILTY SANDSTONE: light gray, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

16,750-16,800 SILTY SANDSTONE: light gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

16,800-16,850 SILTY SANDSTONE: light gray brown-light gray, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

16,850-16,900 SILTY SANDSTONE: light gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

16,900-16,950 SILTY SANDSTONE: light gray brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

16,950-17,000 SILTY SANDSTONE: light gray brown-light gray, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,000-17,050 SILTY SANDSTONE: light gray brown-light gray, rare brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,050-17,100 SILTY SANDSTONE: light gray-light gray brown, rare brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,100-17,150 SILTY SANDSTONE: light gray brown-light gray, rare brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,150-17,200 SILTY SANDSTONE: light gray-light gray brown, rare brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,200-17,250 SILTY SANDSTONE: light gray-light gray brown, rare brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,250-17,300 SILTY SANDSTONE: light gray brown, rare medium brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,300-17,350 SILTY SANDSTONE: light gray brown, rare medium brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,350-17,400 SILTY SANDSTONE: light gray brown, rare medium brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,400-17,450 SILTY SANDSTONE: light gray-gray brown, rare medium brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

17,450-17,500 SILTY SANDSTONE: light gray brown, rare medium brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,500-17,550 SILTY SANDSTONE: light gray-gray brown, rare medium brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

17,550-17,600 SILTY SANDSTONE: light gray brown, rare medium brown, firm-friable, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,600-17,650 SILTY SANDSTONE: light gray-gray brown, rare medium brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

17,650-17,700 SILTY SANDSTONE: gray brown, rare medium brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

17,700-17,750 SILTY SANDSTONE: light gray-gray brown, rare medium brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated with lubricant

17,750-17,800 SILTY SANDSTONE: light gray-gray brown, firm, fine grained, sub rounded, trace sub angular, moderately-poorly sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated with lubricant

17,800-17,850 Sample moderately contaminated with lube; SILTY SANDSTONE: off white, light gray, rare light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

17,850-17,900 Sample moderately contaminated with lube; SILTY SANDSTONE: off white, light gray, rare light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

17,900-17,950 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, light brown gray, occasional light-medium gray, rare off white, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

17,950-18,000 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, light brown gray, occasional light-medium gray, rare off white, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,000-18,050 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, light brown gray, occasional light-medium gray, rare off white, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,050-18,100 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, light brown, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,100-18,150 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, light brown, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,150-18,200 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, light brown, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,200-18,250 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, occasional light brown, rare medium-light gray, trace off white, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,250-18,300 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, occasional light brown, rare medium-light gray, trace off white, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,300-18,350 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, occasional light brown, rare medium-light gray, trace off white, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,350-18,400 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,400-18,450 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,450-18,500 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, occasional light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately-poorly cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,500-18,550 Sample moderately contaminated with lube; SILTY SANDSTONE: off white, tan, light gray, rare light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,550-18,600 Sample moderately contaminated with lube; SILTY SANDSTONE: off white, tan, light gray, rare light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,600-18,650 Sample moderately contaminated with lube; SILTY SANDSTONE: off white, tan, light gray, rare light brown gray, trace dark gray, firm, fine-very fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,650-18,700 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, medium-light gray, rare off white, firm, fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,700-18,750 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, medium-light gray, rare off white, firm, fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,750-18,800 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, medium-light gray, rare off white, firm, fine grained, sub rounded, occasional sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,800-18,850 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, occasional light brown, rare medium-dark gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light brown spotty oil stain; contaminated cut fluorescence

18,850-18,900 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, light brown, rare cream, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

18,900-18,950 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, light brown, rare cream, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

18,950-19,000 Sample moderately contaminated with lube; SILTY SANDSTONE: medium-light gray, light brown, rare cream, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, rare nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,000-19,050 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, common light brown, rare medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,050-19,100 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, common light brown, rare medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, trace disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,100-19,150 Sample moderately contaminated with lube; SILTY SANDSTONE: light gray brown, common light brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,150-19,200 Sample moderately contaminated with lube; SILTY SANDSTONE: light gray brown, common light brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,200-19,250 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,250-19,300 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, brown gray, occasional medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,300-19,350 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,350-19,400 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, gray, medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,400-19,450 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, brown gray, occasional medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,450-19,500 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,500-19,550 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,550-19,600 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, brown gray, occasional medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,600-19,650 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,650-19,700 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, gray, medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,700-19,750 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, brown gray, occasional medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,750-19,800 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,800-19,850 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, brown gray, occasional medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,850-19,900 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,900-19,950 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown, gray, medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

19,950-20,000 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,000-20,050 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,050-20,100 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,100-20,150 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,150-20,200 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,200-20,250 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,250-20,300 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,300-20,350 Sample moderately contaminated with lube; SILTY SANDSTONE: light gray brown, rare medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,350-20,400 Sample moderately contaminated with lube; SILTY SANDSTONE: light gray brown, rare medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,400-20,450 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown-gray brown, occasional medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, rare disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,450-20,500 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,500-20,550 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,550-20,600 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,600-20,650 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, rare medium brown, trace medium gray, firm, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,650-20,700 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,700-20,750 Sample moderately contaminated with lube; SILTY SANDSTONE: brown gray, rare medium brown, rare medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

20,750-20,780 Sample moderately contaminated with lube; SILTY SANDSTONE: light brown gray, rare medium brown, trace medium gray, firm-friable, fine grained, sub rounded, rare sub angular, moderately sorted, calcareous cement, moderately cemented, occasional disseminated pyrite, trace nodular pyrite, trace intergranular porosity, trace light-medium brown spotty oil stain; contaminated cut fluorescence

HOUSTON, TX 77002 USA

Date: **2/8/2019**

RE: CORES AND SAMPLES

Well Name: **LEWIS FEDERAL 5300 11-31 4BR** Well File No.: **36047**
Location: **LOT1 31-153-100** County: MCKENZIE
Permit Type: **Development - HORIZONTAL**
Field: **BAKER** Target Horizon: BAKKEN

Dear MICHAEL KUKUK:

North Dakota Century Code Section 38-08-04 provides for the preservation of cores and samples and their shipment to the State Geologist when requested. The following is required on the above referenced well:

1) All cores, core chips and samples must be submitted to the State Geologist as provided for under North Dakota Century Code: Section 38-08-04 and North Dakota Administrative Code: Section 43-02-03-38.1.

2) Samples: The Operator is to begin collecting sample drill cuttings no lower than the:
Base of the Last Charles Salt
   - Sample cuttings shall be collected at:
     - o 30' maximum intervals through all vertical and build sections.
     - o 200' maximum intervals through any horizontal sections.
   - Samples must be washed, dried, placed in standard sample envelopes (3" x 4.5"), packed in the correct order into standard sample boxes (3.5" x 5.25" x 15.25").
   - Samples boxes are to be carefully identified with a label that indicates the operator, well name, well file number, American Petroleum Institute (API) number, location and depth of samples; and forwarded in to the state core and sample library within 30 days of the completion of drilling operations.

3) Cores: Any cores cut shall be preserved in correct order, boxed in standard core boxes (4.5", 4.5", 35.75"), and the entire core forwarded to the state core and samples library within 180 days of completion of drilling operations. Any extension of time must have approval on a Form 4 Sundry Notice.

All cores, core chips, and samples must be shipped, prepaid, to the state core and samples library at the following address:

ND Geological Survey Core Library
2835 Campus Road
Grand Forks, ND 58202

North Dakota Century Code Section 38-08-16 allows for a civil penalty for any violation of Chapter 38 08 not to exceed $12,500 for each offense, and each day's violation is a separate offense.

Sincerely

Stephen Fried
Geologist

DETAILS OF WORK

Oasis Petroleum respectfully requests a revised waiver to Rule 43-02-03-31 in regard to running open hole logs for the above-referenced well. Justification for this request is as follows:

The Oasis Petroleum's Lewis Federal 5300 31-31H (File No. 20314, API No. 33-053-03433-00-00). The proposed location is within a mile of the subject well.

If this exception is approved, Oasis Petroleum will run a CBL on the intermediate string, and we will also run GR to surface. Oasis Petroleum will also submit two digital copies of each cased hole log and a copy of the mud log containing MWD gamma ray.

RE: HORIZONTAL WELL
LEWIS FEDERAL 5300 11-31 4BR
LOT1 Section 31-153N-100W
McKenzie County, North Dakota
Well File # 36047

Dear Jennifer:

Pursuant to Commission Order No. 29373, approval to drill the above captioned well is hereby given. The approval is granted on the condition that all portions of the well bore not isolated by cement, be no closer than the 500' setback from the north & south boundaries and 150' setback from the east & west boundaries within the 1280 acre spacing unit consisting of Sections 31 & 32 T153N-R100W. The east setback is based on a production liner cemented in the lateral with a wet shoe and the ability to frac out the shoe.

PERMIT STIPULATIONS:

- **Remote or automatic shut off devices required on all equipment.**
- **Pursuant to NDAC 43-02-03-48.1 (CPF-Comingling of Production) "The director shall have authority to approve requests to consolidate production equipment at a central location". Oasis must run a CBL on the 9-5/8" intermediate string which is proposed to isolate the Dakota Group prior to running 7" casing.**
- **Oasis must contact NDIC Field Inspector Richard Dunn at 701-770-3554 prior to location construction.**

SITE PROVISIONS:

Location Construction Commencement (Three Day Waiting Period)

Operators shall not commence operations on a drill site until the 3rd business day following publication of the approved drilling permit on the NDIC - OGD Daily Activity Report. If circumstances require operations to commence before the 3rd business day following publication on the Daily Activity Report, the waiting period may be waived by the Director. Application for a waiver must be by sworn affidavit providing the information necessary to evaluate the extenuating circumstances, the factors of NDAC 43-02-03-16.2 (1), (a)-(f), and any other information that would allow the Director to conclude that in the event another owner seeks revocation of the drilling permit, the applicant should retain the permit.

Perimeter Berm

A location perimeter berm is required surrounding the entire location.

Drilling pit

NDAC 43-02-03-19.4 states that "a pit may be utilized to bury drill cuttings and solids generated during well drilling and completion operations, providing the pit can be constructed, used and reclaimed in a manner that will prevent pollution of the land surface and freshwaters. Reserve and circulation of mud system through earthen pits are prohibited. All pits shall be inspected by an authorized representative of the director prior to lining and use. Drill cuttings and solids must be stabilized in a manner approved by the director prior to placement in a cuttings pit."

SPUDDING PROVISIONS:

Filter Socks

A covered leak-proof container (with placard) for filter sock disposal must be maintained on the well site beginning when the well is spud, and must remain on-site during clean-out, completion, and flow-back whenever filtration operations are conducted.

Conductors, Rat holes, and Mouse holes

To protect near surface groundwater any conductor, rat, or mouse hole drilled must be constructed with a string of casing and cemented to ground level. Any such string must be secured at the surface when not in use. In addition, all rat and mouse holes must be plugged with cement and cut off at least 4' below final grade within a reasonable timeframe after the rig completes drilling operations on the pad.

Permit Fee & Notification

Payment was received in the amount of $100 via credit card. It is requested that notification be given immediately upon the spudding of the well. This information should be relayed to the Oil & Gas Division, Bismarck, via telephone (701) 328-8020. The following information must be included: Well name, legal location, permit number, drilling contractor and rig number, company representative, date and time of spudding. Office hours are 8:00 a.m. to 12:00 p.m. and 1:00 p.m. to 5:00 p.m. Central Time. Please leave a message if after hours or on the weekend.

DRILLING PROVISIONS:

Casing Strings

Due to the possibility of severe casing wear during the drilling of the vertical and curve sections of the well, which could compromise isolation of the Fox Hills Formation, operators are not to deviate in the surface casing portion of the hole.

All strings of surface casing shall stand cemented under pressure for at least 12 hours before drilling the plug or initiating tests. Surface casing, production or intermediate casing strings must be allowed to stand under pressure until the tail cement has reached a compressive strength of at least 500 psi before drilling the plug or initiating tests.

Survey Requirements for Horizontal, Horizontal Re-entry, and Directional Wells

NDAC Section 43-02-03-25 (Deviation Tests and Directional Surveys) states in part (that) the survey contractor shall file a certified copy of all surveys with the director free of charge within thirty days of completion. Surveys must be submitted as one electronic copy, or in a form approved by the director. However, the director may require the directional survey to be filed immediately after completion if the survey is needed to conduct the operation of the director's office in a timely manner. Certified surveys must be submitted via email in one adobe document, with a certification cover page to certsurvey@nd.gov.

Survey points shall be of such frequency to accurately determine the entire location of the well bore.

Specifically, the Horizontal and Directional well survey frequency is 100 feet in the vertical, 30 feet in the curve (or when sliding) and 90 feet in the lateral.

Logs

NDAC Section 43-02-03-31 requires the running of (1) a suite of open hole logs from which formation tops and porosity zones can be determined, (2) a Gamma Ray Log run from total depth to ground level elevation of the well bore, and (3) a log from which the presence and quality of cement can be determined (Standard CBL or ultrasonic cement evaluation log) in every well in which production or intermediate casing has been set, this log must be run prior to completing the well. All logs run must be submitted free of charge, as one digital TIFF (tagged image file format) copy and one digital LAS (log ASCII) formatted copy. Digital logs may be submitted on a standard CD, DVD, or attached to an email sent to digitallogs@nd.gov Thank you for your cooperation.

Form 1 Changes & Hard Lines

Any changes, shortening of casing point or lengthening at Total Depth or change in completion technique within the Bakken-Three Forks Petroleum System must have prior approval by the NDIC. The proposed directional plan is at a legal location. **Based on the azimuth of the proposed lateral the maximum legal coordinate from the well head at Total Depth is: 10115' east.**

Sincerely,

Nathaniel Erbele

MWD Every 100 Feet	**30** Feet	**90** Feet	**Ryan**

NOTE: A Gamma Ray log must be run to ground surface and a CBL must be run on intermediate or longstring casing string if set.

Surveys are required at least every 30 feet in the build section and every 90 feet in the lateral section of a horizontal well. Measurement inaccuracies are not considered when determining compliance with the spacing/drilling unit boundary setback requirement except in the following scenarios: 1) When the angle between the well bore and the respective boundary is 10 degrees or less; or 2) If Industry standard methods and equipment are not utilized. Consult the applicable field order for exceptions.

If measurement inaccuracies are required to be considered, a 2° MWD measurement inaccuracy will be applied to the horizontal portion of the well bore. This measurement inaccuracy is applied to the well bore from KOP to TD.

REQUIRED ATTACHMENTS: Certified surveyor's plat, horizontal section plat, estimated geological tops, proposed mud/cementing plan, directional plot/plan, $100 fee.

See Page 2 for Comments section and signature block.

COMMENTS, ADDITIONAL INFORMATION, AND/OR LIST OF ATTACHMENTS

April 9, 2014

RE: **Filter Socks and Other Filter Media**
Leakproof Container Required
Oil and Gas Wells

Dear Operator,

North Dakota Administrative Code Section 43-02-03-19.2 states in part that all waste material associated with exploration or production of oil and gas must be properly disposed of in an authorized facility in accord with all applicable local, state, and federal laws and regulations.

Filtration systems are commonly used during oil and gas operations in North Dakota. The Commission is very concerned about the proper disposal of used filters (including filter socks) used by the oil and gas industry.

Effective June 1, 2014, a container must be maintained on each well drilled in North Dakota beginning when the well is spud and must remain on-site during clean-out, completion, and flow-back whenever filtration operations are conducted. The on-site container must be used to store filters until they can be properly disposed of in an authorized facility. Such containers must be:

- leakproof to prevent any fluids from escaping the container
- covered to prevent precipitation from entering the container
- placard to indicate only filters are to be placed in the container

If the operator will not utilize a filtration system, a waiver to the container requirement will be considered, but only upon the operator submitting a Sundry Notice (Form 4) justifying their request.

As previously stated in our March 13, 2014 letter, North Dakota Administrative Code Section 33-20-02.1-01 states in part that every person who transports solid waste (which includes oil and gas exploration and production wastes) is required to have a valid permit issued by the North Dakota Department of Health, Division of Waste Management. Please contact the Division of Waste Management at (701) 328-5166 with any questions on the solid waste program. Note oil and gas exploration and production wastes include produced water, drilling mud, invert mud, tank bottom sediment, pipe scale, filters, and fly ash.

Thank you for your cooperation.

Sincerely,

Bruce E. Hicks
Assistant Director

Comments:

Request waiver of open hole logs. Justification well: Lewis Federal 5300 31-31H (33053034330000) ~0.54 miles S of SHL

The above open hole logs will be run if Oasis does not submit and receive an approved logging waiver from the NDIC.

Currently planned for 50 stages. No frac string planned. 4-1/2" cemented liner completed using plug & perf method

Oasis Petroleum does not use Diesel Fuel, as defined by the US EPA in the list below, in our hydraulic fracture operations.

68334-30-5 (Primary Name: Fuels, diesel) 68476-34-6 (Primary Name: Fuels, diesel, No. 2)68476-30-2 (Primary Name: Fuel oil No. 2)

68476-31-3 (Primary Name: Fuel oil, No. 4)8008-20-6 (Primary Name: Kerosene)

SURFACE CASING AND CEMENT DESIGN

Size	Interval	Weight	Grade	Coupling	I.D.	Drift
13-3/8"	0' - 3600'	54.5	J-55	STC	12.615"	12.459"

Interval	Description	Collapse	Burst	Tension
		(psi) / a	(psi) / b	(1000 lbs) / c
0' - 3600'	13-3/8", 54.5#, J-55, LTC, 8rd	1130 / 0.67	2730 / 1.12	514 / 1.90

API Rating & Safety Factor

a) Collapse based on full casing evacuation with 9 ppg fluid on backside (3600' setting depth).
b) Burst pressure based on 13 ppg fluid with no fluid on backside (3600' setting depth).
c) Based on string weight in 9 ppg fluid at 3600' TVD plus 100k# overpull. (Buoyed weight equals 169k lbs.)

Cement volumes are based on 13-3/8" casing set in 17-1/2 " hole with 60% excess to circulate cement back to surface.
Mix and pump the following slurry.

Pre-flush (Spacer): **20 bbls** fresh water

Lead Slurry: **1262 sks** (652 bbls), 11.5 lb/gal, 2.97 cu. Ft./sk Varicem Cement with 0.125 il/sk Lost Circulation Additive

Tail Slurry: **349 sks** (72 bbls), 13.0 lb/gal, 2.01 cu.ft./sk Varicem with .125 lb/sk Lost Circulation Agent

Re: Lewis Federal 5300 11-31 4BR

To Whom It May Concern:

Pursuant to NDAC 43-02-03-16, Oasis respectfully submits the Lewis Federal 5300 11-31 4BR well APD for your consideration. Included with the application are all necessary attachments; an itemized list is included on the following page.

This well is located in Section 31 of Township 153N, Range 100W. This location is part of Baker field and is in a generally rural area. An aerial overview has been provided with this application. Additionally, this well is federal and a separate APD has been submitted.

The landowner, Wesley Lindvig, has been fully apprised of Oasis' development plans. Pursuant to safety regulation NDAC 43-02-03-28, there are no occupied dwellings within 500 feet of the well. Drill cuttings and solids will be disposed at the Secure Energy Disposal located at 5807 W. Front Street, Williston, ND 58801. Liquids from the drilling process will be taken to an authorized disposal facility.

Please do not hesitate to contact me should you have any additional questions or concerns regarding this well. Thank you for your consideration.

Respectfully,

Jennifer Swenson
